Coding a Valentine's Day Heart

1. Copy the code from steamcoded.org/lessons/ValentineGrid.svg.txt

2. Add a path element to the code
   `<path d="M150,58C180,-2,260,-2,280,58" />`

3. Add to the path element definition: C310,158,170,208,150,268
   Hint: `<path d="M150,58C180,-2,260,-2,280,58 C310,158,170,208,150,268" />`

4. Add to the path element definition: C130,208,-10,158,20,58

5. Add to the path element definition: C40,-2,120,-2,150,58z

6. Add an attribute to the path element: class="heart"

7. Copy the path element and paste on the next line, then
   change the class attribute from class="heart" to class="outline"

8. Add a text element: `<text x="150" y="100">Happy</text>`

9. Add a text element: `<text x="150" y="150">Valentine's</text>`

10. Add a text element: `<text x="150" y="195">Day</text>`

11. Animate the heart outline by adding an animate element as a child of the
    path element with class="outline"
    `<animate attributeName="stroke-dashoffset" values="0;-10" dur="0.1s" repeatCount="indefinite" />`

    Note: remove the ending / on the path element and add an ending `</path>` on the line
    after the animate element - so the animate element is a child of the path element

When complete, change the style attribute of the element with id="grid"
from "display:initial" to "display:none" which hides the grid. Then change
the style attribute of the element with id="code" from "opacity:0.5" to "opacity:1

12. Edit the style section to change colors or fonts
    Google has many fonts to use at: http://fonts.google.com

13. Change the message from Happy Valentine's Day to:
    I Love You
    I Love My Teacher
    I Love My Parents
    I Love School
    I Love Coding
    I Love Math
    I Love Art
    or any of the Candy Heart sayings - I'M YOURS, BE MINE, LOVE YOU, etc.

    Adjust text element x and y attributes and font-size as needed
